

Twigs

Albasia Twigs

This panel is supplied prefinished with a low sheen lacquer. Albasia Twigs is suitable for use in medium traffic areas. In the timber industry Albasia wood products are generally sought after for the high strength to weight. Albasia trees grow very easy in many types of soil and grow very fast. They can reach a height of approximately 10 metres and diameter of 20-30 cm in only two years. The twigs used in our panels are waste from the timber industry, and would otherwise be burned or turned into landfill.

Rosewood Twigs

This panel is supplied prefinished with an organic oil found in pineapple fibre. The natural hardness of this timber makes it ideally suitable for high traffic areas. Rosewood has always been a popular timber within the woodworking industry due to the colour of the heartwood and the dark attractive figure of the timber. The rosewood in our panels comes from TFT certified plantations. The pieces are smaller branches cut from logs used by the woodworking industry. This would normally be discarded to be used as firewood.
