

NAVSHAKER™

NAVSHAKER™ designed & crafted for ease of application and seamless lines

A simple installation method is required for the ultimate NAVSHAKER™ finish:

1. Cut panels & rails lengths into the desired shaker profile size
2. With a CNC or Routing Machine use a Amana Tool 45664 Carbide Tipped T-Slot 5/8 x 3/16 CH x 1/2 Inch SHK Router Bit to prepare the edges of panels. Alternatively, contact your local tool sharpener with this information to source this tool in metric format.
3. Slide & glue the rails to surround the routed panel edges
4. Set & install the finished NAVSHAKER™ panels

Below is the technical dimensions of the detailed product:
