

We produce our Naveneer™ samples by cutting standard 3m x 1.2m pressed boards into A4, A5, and 135 x 95 mm formats. This approach ensures that the samples you receive accurately reflect the texture and scale of the woodgrain as it will appear on finished joinery.

The images below provide a visual reference of how much of a full panel is captured within an A4 sample.

If you would like to view full-sized panels across our complete product range, you can book an appointment at our Alexandria showroom.

Please note that, Naveneer™ is a reconstructed timber veneer range, while this does provide a high level of consistency there may still be a level of variation across panels and samples.
